

SaaS Platform Support Guide: Password Reset and Multi-Factor Authentication

1. Standard Self-Service Password Reset Procedure

If you forgot your password or wish to update it, follow these steps:

1. Navigate to the login screen and click the 'Forgot Password' link below the login form.
2. Enter your registered email address and click 'Send Reset Link'.
3. Check your email inbox for a message from support@saasplatform.com. The email subject will be 'Reset Your Password'.
4. Click the link inside the email. Note that for security purposes, this password reset link is only active for 15 minutes.
5. Enter your new password, confirm it, and click 'Submit'. Your password must be at least 12 characters long, containing at least one uppercase letter, one lowercase letter, one number, and one special character.

2. Troubleshooting Password Reset Link Issues

If you do not receive the email, please check your Spam or Junk folders. Some enterprise firewalls may delay or quarantine incoming automated emails; check with your IT administrator if the email does not arrive within 5 minutes. If the link is expired (showing an 'Expired Token' error), go back to the login page and trigger a new request.

3. Multi-Factor Authentication (MFA / 2FA) Reset

If you have lost access to your MFA authentication app (e.g., Google Authenticator, Duo) and did not save your recovery codes, you will not be able to log in. In this scenario, you must contact your organization's Administrator. The Organization Admin can reset MFA for your user profile in the User Management settings panel. If you are the Owner or sole Admin of the account, you will need to contact our Customer Support team for manual security verification before we can reset your MFA configurations.
